

ABSTRACT OF DISCLOSURE

A medium tray (101) comprises a medium support
(1) connected to a medium feeding section (100) of an image
5 recording apparatus (200) and receiving record medium (P),
and a medium guide (5) extending from the medium support
(1) and supporting the record medium (P) such that an angle
of a rear portion of the record medium (P) is changed. A
lengthy record medium (P) having a length greater than the
10 medium support (1) is supported by the medium guide (5)
with the rear portion thereof directed at a different angle
so that the lengthy record medium (P) is loaded in the
medium tray (101) without enlarging an area projecting from
the image recording apparatus (200).
